

# Care Collaboration & Mobile Health Strategies

## Connecting Care Teams for Better Patient Outcomes

Care Thread's HIPAA-compliant mHealth platform improves the way healthcare providers communicate and coordinate care in real time, bridging gaps in communication to enable more effective patient-centered care and produce better health outcomes.

PARTNERS

HEALTHCARE MANAGEMENT CONSULTANTS

To support our clients' goals of improving patient health and enhancing the overall patient experience, Beacon Partners works with providers to develop mobile health (mHealth) strategies that best fit the needs of their physicians and patients. Our healthcare experts have worked in hospitals and physician groups and have a deep understanding of their challenges. This experience helps our clients' clinical, operational, and technology teams implement strategies and assist with integrating the mHealth technologies that will improve care collaboration.

Beacon Partners and Care Thread – a HIPAA-compliant mHealth platform – offer healthcare organizations a mobile care collaboration solution that will improve the way patients and providers communicate and coordinate care in real-time. By uniting a patient's team of providers in one virtual platform, the Care Thread secure mobile application allows physicians to coordinate and collaborate on the go in order to deliver more efficient, patient-centered care through a suite of communication and collaboration solutions.

### We can develop the right solution for your needs by:

#### Creating a strategy for care collaboration

- Implementing mobile technologies and integrating them with care coordination processes
- Integrating mHealth technologies with EHRs, bed management, nurse call and other systems and devices

Our shared experience brings a unique combination of mHealth tools and a deep understanding of care delivery, workflow optimization, and physician needs in a secure mobile application to facilitate and increase real-time care collaboration.

## Suite of care collaboration mHealth solutions include:

### SECURE MOBILE MESSAGING

Communication should be fast, easy, and secure.

- HIPAA-compliant Secure Mobile Messaging accelerates communication between providers
- Enables providers to send messages to colleagues about a specific patient or topic in real time
- Messages are not written to any device, so loss or theft of a device does not result in a breach – essential for any BYOD program

### CARE TEAM MAPPING™

Connecting Care Team members in real time.

- Connects all members of a patient's care team in one virtual location
- Providers can easily identify colleagues supporting the same patient, and efficiently communicate, collaborate, and consult on care plans in real time
- Supports team-based approach to patient care delivery within hospitals, and across Accountable Care Organizations and Patient-Centered Medical Homes

### COLLABORATIVE WORKFLOW

Coordinate care smarter.

- Clinical Hand-Off Summaries allow providers to share information about patients during care transitions
- Shared Task Lists allow providers to create and prioritize tasks associated with each patient, which can be visible to the entire care team
- Tools align providers on the care plan, foster better team work and care coordination, reduce medical errors, and improve quality of care

### REAL-TIME CLINICAL INFORMATION

Access clinical information as it becomes available, anywhere.

- Labs, reports, pharmacy, and other clinical data from existing information systems is pushed directly to the application as it becomes available
- Consolidated view of a patient's clinical activities is now accessible at the point of care, providing further context to the patient's condition and care plan
- System agnostic, Care Thread integrates with existing IT assets through integrations with information and clinical systems
