care thread

COMPANY OVERVIEW

Care Thread, Inc. is a mobile healthcare software company founded in late 2011. Care Thread's HIPAA compliant mHealth platform improves the way healthcare providers communicate and coordinate care in real time, bridging gaps in communication to enable more effective patient-centered care and produce better patient outcomes.

CARE THREAD SOLUTIONS FOR HEALTHCARE

- Supports team-based, **patient-centered care coordination** within hospitals, provider groups, and across care transitions

- **Care Team Mapping**™ keeps track of the entire care team in real time, eliminating the runaround common to provider communications

- **Real time access to patient information** that reduces medical errors, unnecessary treatments, and poor handoffs through

- **Improve provider workflows**, patient safety, satisfaction, and overall quality of care

- **Interoperable** with existing technology systems

- **BYOD-friendly, HIPAA-compliant** communication

Suite of Care Collaboration mHealth Solutions
Connecting Care Teams for Better Patient Outcomes

Secure Mobile Messaging
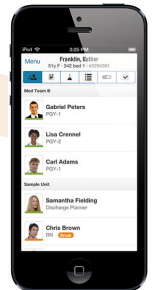

**Communication
should be
fast, easy, and secure**

- HIPAA-compliant Secure Mobile Messaging accelerates communication between providers
- Enables providers to send messages to colleagues about a specific patient or topic in real time
- Messages are not written to any device, so loss or theft of a device does not result in a breach – essential for any BYOD program

Care Team Mapping™
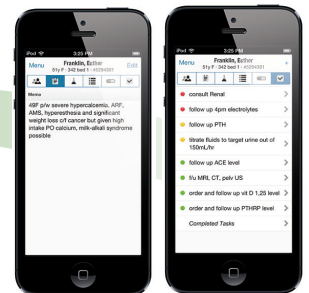

**Connecting
Care Team members
in real time**

- Connects all members of a patient's care team in one virtual location
- Providers can easily identify colleagues supporting the same patient, and efficiently communicate, collaborate, and consult on care plans in real time
- Supports team-based approach to patient care delivery within hospitals, and across Accountable Care Organizations and Patient-Centered Medical Homes

Collaborative WorkFlow

**Coordinate
care smarter**

- Clinical Hand-Off Summaries allow providers to share information about patients during care transitions
- Shared Task Lists allow providers to create and prioritize tasks associated with each patient, which can be visible to the entire care team
- Tools align providers on the care plan, foster better team work and care coordination, reduce medical errors, and improve quality of care

Real-Time Clinical Information

**Access
clinical information
as it becomes available,
anywhere**

- Labs, reports, pharmacy, and other clinical data from existing information systems is pushed directly to the application as it becomes available
- Consolidated view of a patient's clinical activities is now accessible at the point of care, providing further context to the patient's condition and care plan
- System agnostic, Care Thread integrates with existing IT assets through integrations with information and clinical systems
